

Priya Raghunathan

Cloud Architect | Platform design and governance

Dublin · priya.raghunathan@correo-ficticio.ie · +353 80 000 014

PROFILE

Cloud architect with eleven years in infrastructure, the last six designing platforms for large migrations. I work between engineering teams and finance, which means I am as accountable for the monthly bill as for the architecture diagram. I favour boring, well understood building blocks.

EXPERIENCE

Principal Cloud Architect at Workhuman (2021-2026). Owned the target architecture for the migration of a monolithic estate across three regions, delivered in eighteen months with no customer facing downtime. Designed the landing zone, account structure and guardrails, including tagging policy and automated cost attribution per team. Drove a cost optimisation programme that cut monthly platform spend by 34% through right sizing, committed use discounts and shutting down forgotten environments. Chaired the architecture review board. Cloud Engineer at Version 1 (2017-2021). Infrastructure as code for public sector clients, mostly regulated workloads with strict data residency. Systems Engineer at Eircom (2014-2017). Virtualisation and storage.

PROJECTS

Multi account governance model with automated compliance checks, so that a new team gets a compliant account in under an hour instead of waiting three weeks for review. Disaster recovery design and quarterly game days with real failover, not tabletop exercises.

TECHNOLOGIES

Terraform, Terragrunt, Kubernetes, Docker, Python, Go, networking and identity design, Datadog, well architected reviews, FinOps practices.

EDUCATION

MSc Distributed Systems, Trinity College Dublin (2012-2013). BEng Electronic Engineering, Anna University (2008-2012).

CERTIFICATIONS

Certified Kubernetes Administrator, 2021. Professional level cloud architecture certification, 2022.

ACHIEVEMENTS

Brought platform provisioning time for a new product team from three weeks to under an hour through self service templates with policy built in. Ran the migration programme with zero customer facing downtime across eighteen months and forty two services, using a phased cutover with rollback rehearsed for each wave. Established the internal architecture decision record practice, so that the reasoning behind a choice survives the person who made it.

ADDITIONAL TRAINING

FinOps practitioner training, 2024. Course on zero trust network design, 2023. Training on regulated workloads and data residency requirements in the European Union, 2022.

OTHER

Available at three months notice due to contractual terms. Open to hybrid work in Dublin or remote within the European Union. Regular speaker at cloud architecture meetups and mentor in a programme supporting women moving into infrastructure engineering.

LANGUAGES

English native. Tamil native. Spanish A2.
